TECHRAMPSGROUP™

SPORT FACILITIES OF XXI CENTURY

TECHRAMPS GROUP - we are a Polish group of brands dealing in the design and construction of innovative sports facilities. We have been involved in comprehensive investment implementation for 16 years now. Those were years of intense learning and self-improvement. We have gladly put into service over 1000 facilities made at the highest level. We can proudly say that we equip European cities with the best skateparks, pumptracks, flowparks, wakeparks, waveparks and snowparks.

We base the work of the whole Techramps Group team on jointly developed values: professionalism, commitment, cooperation and innovation. This ensures us the position of a market leader. Our team is made up of people for whom sport is one of life's priorities. By combining our passion with our work, we pursue the need to share what's important to us and create for others. We hire the best specialists in the design and construction industry, whom we equip with professional equipment and work tools. Our own office and construction facilities, as well as a production hall with a total area of over 2,000 m² allow us to independently carry out even very complex investments. We start cooperation from a concept design. This part belongs to the Slo Concept designer team. Then we carry out a real-world visualization of the facility by creating a 3D model and placing it on the map. We then proceed with developing the executive design. It is forwarded to the investor and the representative of our production plant. The production process of all facilities starts at a modern hall equipped with extensive wood and steel processing machinery. The semi-finished products and the implementation of the investment lies with the specialized construction and assembly teams of the Techramps Group. Techramps Concrete, Techramps Modular, Pumptrack.eu, Slo Concept, Wakepro, Flowparks and Waveparks are brands, but above all, people with a passion and commitment to make Sports Facilities of the XXI century.

OUR BRANDS

001. CONCRETE SKATEPARKS

Techramps Concrete - after several years of development and gaining experience, the Techramps Group team has expanded its business with the design and construction of concrete skateparks. The fashion and culture from across the ocean has put another challenge ahead of us - to provide Polish local government units with the knowledge about modern methods for constructing this type of sports facilities. We quickly expanded our assets with specialized concrete-working equipment, which we use to shotcrete and smoothen skateparks. The investment process begins with design works: developing an individual concept, construction and executive design, land development and all arrangements necessary to obtain a legally valid building permit. Our facilities are adapted to the city's architecture and designed for future users.

002. VERT RAMPS

Vert Ramp - Vert Ramp is a freestanding element adapted for skateboarding, rollerskating, trial bikes and scooters, which perfectly fills the urban space or the area of an existing skatepark. The Vert Ramp is impressive size above all else. This element has a characteristic ramp reaching the vertical wall, or the so-called vert. It allows users to perform aerial acrobatics up to several meters above the ramp's upper edge. This makes it one of the most spectacular disciplines, providing many thrills to riders and observers alike.

003. MODULAR SKATEPARKS

Techramps Modular - one of the first branches opened by the Techramps Group. With the cooperation of the whole team we provide European cities with modular skateparks based on specially developed technology. The entire production of modular skateparks takes place in our Cracow production hall, where we cut individual components using specialized CNC machines. The machinery and the team's experience allows us to maintain precise accuracy in the production of individual components. The final stage of the investment takes place directly at the customer's. Our assembly teams are responsible for that. In the spirit of our values, we care for work safety and internal order, and our experience, knowledge and continuous development make our facilities fully professional. It was the Techramps Modular team that built the first skatepark in Poland and started the development of XXI century sports facilities.

004. FLOWPARKS

FlowParks - manufacturer of flowparks for street workout and parkour. The company belonging to the Techramps Group is made up of people who combine solid engineering knowledge with many years of experience in sports. With this, its products have been a good response to the increasing popularity of urban activities from the very beginning. Flowparks employees accept the most unconventional projects, which allows for the implementation of innovative sports facilities.

FLOWPARKS.com

005. PUMPTRACKS

Under the Pumptrack.eu brand, we have been designing and building composite tracks for several years. Pumptracks are year-round facilities adapted for playing and learning to ride on bicycles, roller skates, skateboards and scooters. Our aim is to create places for spending free time together for children, adolescents and adults alike. Together with local government units, we work on shaping pro-health attitudes among residents. Moreover, a facility such as a pumptrack is a place to meet, achieve one's goals, fulfill passions and work out. Our tracks, built in the immediate vicinity of a skatepark, streetwork-out park or wavepark will make up a 21st century complex of sports facilities.

006. WAKEPARKS

Wakepro – leader on the Polish market, one of the Europe's leading manufacturer of wakeboard obstacles called wakeparks. Wakepro is a brand with experience that made its first steps as one of the first five manufacturers in the world. We stand out with our precise manufacture of components by certified personnel using CNC plotters and high-quality materials. Our wakeparks are professional, thought-out and calculated projects. That is the essence of a safe product that lasts and is consistent with the expectations and assumptions. The main features distinguishing the WakePro brand are experience, qualified personnel, extensive machinery, and advanced design process.

Waveparks - the latest brand of the Techramps Group, which we created thanks to the work and commitment of the entire team. WaveParks involve modern technology and a system that allows surfing like on a real sea wave. The production of waveparks uses high quality materials that we process in our production hall. Our mix of passion and experience has allowed us to launch a European product that will soon appear in many innovative cities.

Slo Concept - We are an experienced team of designers of sports and recreation facilities. Since 2003, we have developed over 2000 concepts of skate-parks, pumptracks, street workout parks, wakeparks and waveparks. Over half of our projects were completed under the Techramps Group and we have equipped European cities with innovative sports facilities. While working on the project, we take care of every detail to meet the expectations of the investor and future users. We are a team closely related to the sports and recreation sector, which makes the facilities we design functional, safe and adapted to latest trends.

009. SNOWPARKS

Under the Snowparki.com, we design and build snowparks for those who love extreme snowboarding and skiing. Since snowboarding and skiing in their freestyle form have made a presence on the slopes for good, snowparks have become an integral part of ski resorts around the world. While building such facilities, we pay particular attention to the safety of users and other people using winter routes. We are Poland's leading manufacturer of snowparks, and our projects can be tested on over 40 slopes.

010. OUR VALUES

- Professionalism - work quality, punctuality and specialist knowledge are our determinants of professionalism. We work at a high level, but we do not forget that the work need to be safe for workers. We are specialists in every area of our activities.
- Cooperation - we believe that cooperation and good communication are the key to solve all problems. Our cooperation is based on honesty and outrightness. To be able to evolve, we share our experience and knowledge.
- Innovation - crossing barriers and original solutions drive us to effective work. To keep our leadership position on the market we are boldly looking for new and interesting solutions.
- Commitment - each of us is responsible for the assigned tasks and for the workplace, in which we value a good atmosphere. We create and like our workplace so we care for it and for each other. We approach to all tasks with enthusiasm, energy and serenity.

011. REALIZATIONS IN EUROPE

You can check out our realizations around Europe. We have also builded few sport facilities in United Arab Emirates (Dubai) and Israel (Ramla).
